

great people, great work, real results

Principal Toxicological Pathologist

Ledbury, Herefordshire

Salary and benefits commensurate with this senior position

Sequani Non-Clinical is looking to recruit into its highly respected toxicological pathology team. Our pathologists are key contributors in the delivery of our toxicology services across the spectrum of safety evaluation studies in the pharmaceutical, crop-protection and chemical safety sectors. In this role you will be responsible for gross and histopathological investigations, acting as Study Pathologist for regulatory toxicology studies, the training and mentoring of other staff and in a general consultancy role within the business. It is a scientific appointment with no line-management responsibility.

Sequani is an independent, privately owned, CRO located in an outstandingly beautiful area in the west of England. We have built an outstanding, global reputation for scientific depth and on-time delivery that has underpinned a period of exceptional growth.

The successful applicant will be a veterinary pathologist with substantial experience in toxicological pathology and will ideally be board certified (FRCPath or equivalent). Experience of working in a GLP environment will be an advantage but training can be provided for suitable candidates from outside the GLP sector. Fluency in written and spoken English is a requirement.

As a Silver Investors in People organisation we can offer a varied role with excellent personal development opportunities, together with a good range of company benefits. Involvement with learned societies and contribution to scientific meetings and literature are actively encouraged.

To apply and for more information, please go to our careers page on www.sequani.com.
